

# 20% improvement of business agility and faster go-to-market

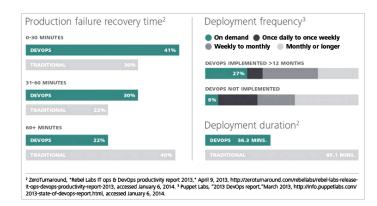

- Promotes continuous delivery best practices by breaking down the silos within the process pipeline.
- Allows the frequency of deployments to be increased from per day to per hours resulting in increased business agility, which facilitates

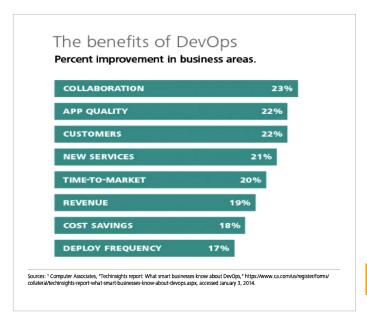

### **Up to 18% saving on deployment costs**

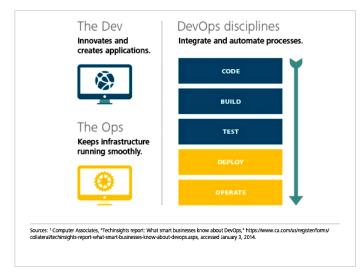

- Eliminates the need for expertise knowledge in different automation tools by providing a single, easy-to-use automation platform.
- Promotes the use of reusable workflows for highly repeatable and reliable deployments.
- Provides visibility to take control over configurations and application changes

### **Discover production bugs faster**

- Delivers products with **fewer bugs** since bugs are discovered and fixed faster.
- Saved time offers extra capacity to improve the quality of the application.

### **Introducing Tempo**

INCLUSIVE SPAN OF AUTOMATION CAPABILITIES

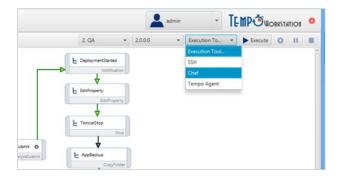

### **TEMPO**

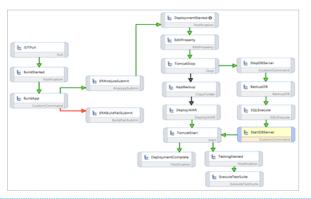

### DEEPER INSIGHTS INTO DEPLOYMENT PIPELINE

Provides execution dashboards with detailed logs to monitor and analyze the status of workflow executions across multiple environments.

### WIDER SPAN OF AUTOMATION CAPABILITIES

Virtusa's Proprietary Automation Framework facilitates an inclusive span of automation capabilities including web, desktop, shell, security agents and email.

### **GRAPHICAL WORKFLOW DESIGNER**

DSL based abstraction and Graphical Workflow Designer enables non-specialists to perform deployments.

The DSL behaves as an abstraction layer on top of the tools, eliminating the need for a broader spectrum of tool-specific knowhow.

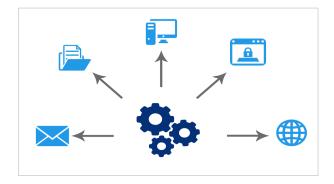

### EASY INTEGRATION INTO BEST-OF -BREED AUTOMATION TOOLS

Easily integrates into best-of-breed automation tools under Virtusa's Proprietary Automation Framework.

Promotes reuse of existing automation scripts with parameterization.

Enables switching between automations tools without re-engineering

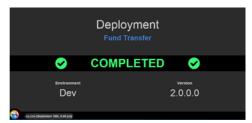

## PARALLEL EXECUTION OF WORKFLOWS

Tempo facilitates parallel execution, reducing time consumption per workflow.

### **BEACON FOR TEMPO**

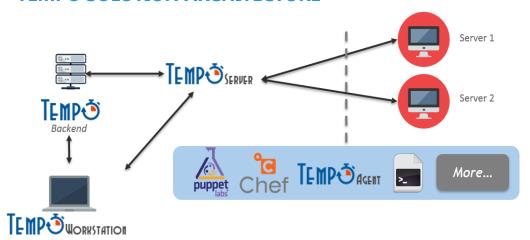

### High value, real-time insights

Monitor and analyze instant notifications and feedback.

#### **TEMPO SOLUTION ARCHITECTURE**

Tempo has three main components: the Workstation, the Backend, and the Server.

#### **Tempo Workstation**

Tempo Workstation helps design deployment workflows using a simple graphical interface. Further, Tempo creates custom workflow tasks, which are reusable and customizable. Unlike other tools, Tempo allows creating the workflow using a simple drag-and-drop tool. Tempo also enables you to define project environments, monitor workflow executions remotely, and log deployments.

#### **Tempo Backend**

Tempo Backend acts as the storage area for the machines, the environments, and the deployment workflows. In addition, the backend acts as the storage area for any other information.

#### **Tempo Server**

Tempo Server queries the backend for deployment workflow details and executes those workflows in the clients. Tempo supports a wide range of automation tools

#### **Business Benefits**

- Improves productivity and efficiency of IT resources
- Improves business agility by reducing the time taken to deliver features and applications
- Increases capacity for innovation across the enterprise
- Greatly reduces the deployment effort
- Reduces training time and resource costs
